

Your Premier Online Driver Education

About Our Company

In the year 2000, DriverEdToGo made history as the very first online DriverEd program, forever changing the landscape of driver education. We didn't just enter the industry; we revolutionized it with our groundbreaking approach.

As industry pioneers, we spearheaded one of the first studies on the effectiveness of online driver education.

With over 6 million graduates to date, our research has not only shaped the industry but also played a key role in guiding national regulations for online driver education adoption.

Today, our courses are not just recognized, they're award winning and approved in numerous states across the country.

How the Course Works

Our course is divided into 16 easy-to-follow chapters, each packed with engaging content, interactive exercises, videos, and driving simulations. Designed for teens, it covers everything from road rules to practical driving skills. After each chapter, there's a quick quiz to check understanding. DriverEdToGo also includes a read-along feature, qualifying as an Americans with Disabilities Act (ADA) compliant resource, aiding students with visual impairments or learning disabilities.

Upon completion of the course students can also take many simulated exams through our PrepWizard software to help them prepare for the real test.

Incorporating DriverEdToGo into your School Program

Incorporate DriverEdToGo seamlessly into your school program with our 100% turnkey, online driver education solution—at zero cost to your school! Here's how:

Branded Registration Portal:

A customized portal linked to your school's website for easy student enrollment. School staff access a secure admin dashboard to track detailed student progress, from chapter readings to quiz scores.

Easy Link Integration:

Provide a direct link on your school's website for student access to our course—simple and convenient.

Coupon Codes: Purchase coupon codes at a discounted bulk rate to distribute to your students, making it even more accessible.

— AS SEEN IN —

"Ourian has created a "white label" industry, which allows companies to offer her programs under their own brand. In effect, once a student of a CyberActive partner institution visits the institution's website, they can click on a link that will direct them to a course that is in complete alignment with the operation's brand.

Students then take the entire course on what appears to be the partner institution's site, so the student will never even know that a transition has occurred."

"We are known for inventing the online traffic school and driver education concept for adults and teens and for our contribution and lobbying efforts in this VoyageLA space. Many of the protocols and laws that govern online traffic school and driver education courses-measures to deter cheating, course timers, course activity monitors and various mechanisms to ensure course security were developed and implemented by my company. Now they are the approval guidelines."

"... Over the years we have consistently been chosen by government agencies, such as the Indiana BMV, the Baton Rouge city government, Iron County Municipality"
